WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

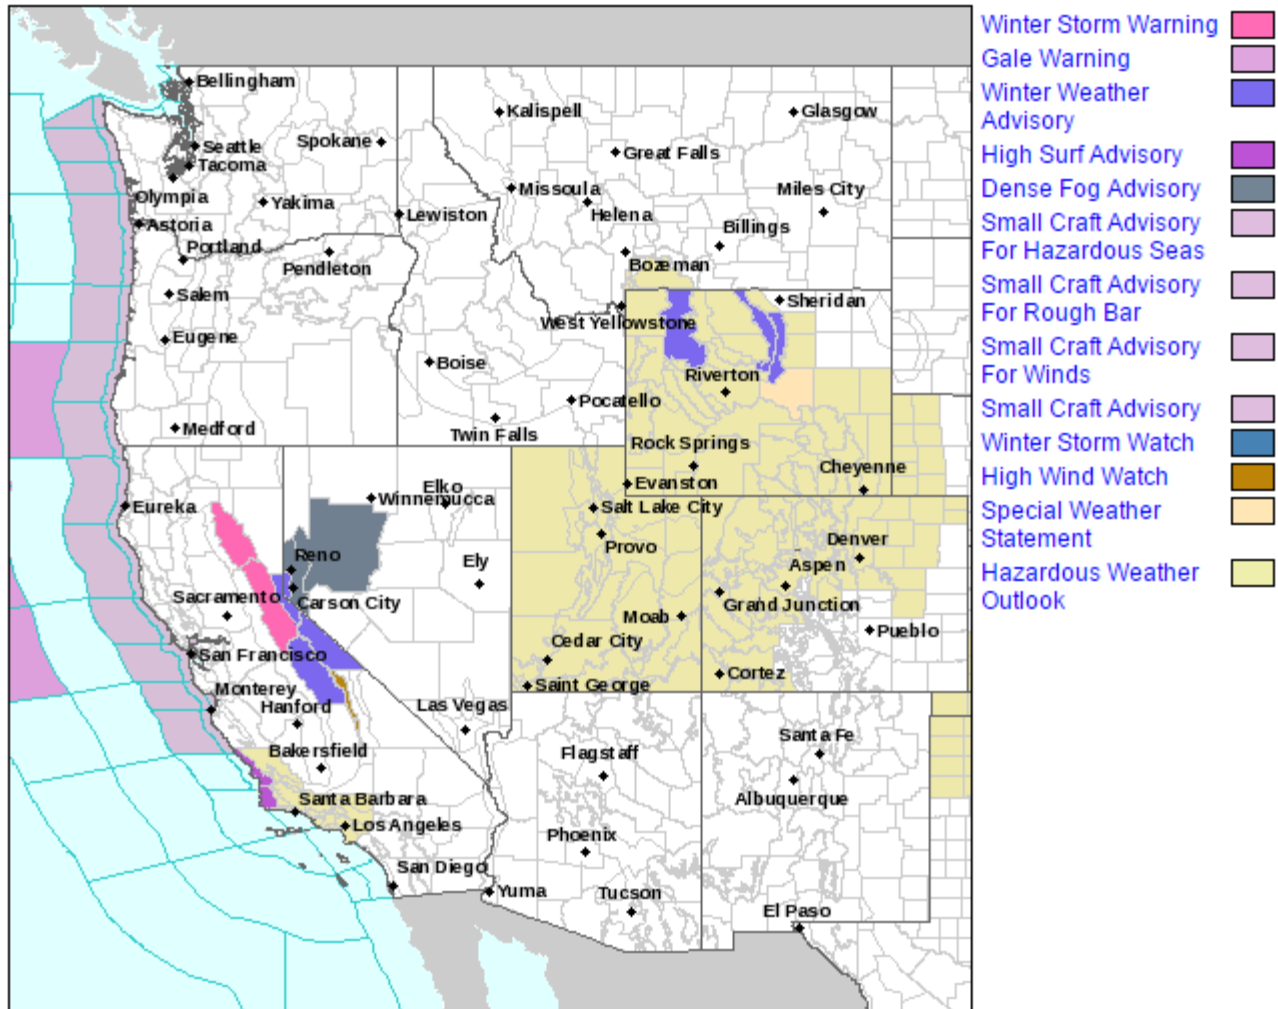

A rather wet, locally windy, unsettled weather pattern will be over the region well into next week. Many sustained periods of precipitation are expected across Northern California into early next week at least.

Snow levels will remain fairly high throughout this series of storms with the level around 6000 to 7000 feet, but locally lower snow levels may be encountered in far northern areas. Three to five inches of storm-total precipitation amounts are expected in our mountains through Monday. Southerly winds will become strong and gusty in many areas Sunday and Monday, with gusts in wind-prone areas and over the higher terrain reaching 35-50 mph. A break between systems looks possible Tuesday into Wednesday, followed by more wet weather systems moving through late next week.

SOUTHERN CALIFORNIA

A storm moving inland across the Central Coast will bring scattered showers through this afternoon, with most locations expected to receive an additional quarter to half inch of rainfall. However, there will be an additional 1 to 2 inches of rainfall across the Central Sierra and its associated foothills. South to southwest winds of 20 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes through tonight. Maximum temperatures will be near normal through today, with 50s to low 60s across the mountains and upper 60s and 70s in the valleys. Another storm will move into Northern California Sunday maintaining scattered showers across the region through Sunday night. Most locations will receive a quarter inch to a half inch of rainfall with this storm, but the mountains of Monterey County and the Central Sierra will receive another 1 to 2 inches of rainfall. Winds will become westerly and remain 20 to 30 mph with gusts to 50 mph across the mountain ridges and desert passes Sunday. A weak weather system may bring light showers at times in the Monday/Tuesday time frame, but little additional accumulation is expected with this last storm. Westerly winds over the wind prone areas will decrease to 15 to 25 mph with gusts to 40 mph early next week. Temperatures will become 5 to 10 degrees below normal Sunday through early next week. A ridge of high pressure will bring a warming trend and a decrease in humidity to the region Wednesday through the end of next week. Winds will be light Wednesday through the end of next week.
